

CITY SELF-INSTALL PROGRAM

For cities with sufficient manpower, the City Self-Install Program for sanitary and storm manholes and catch basins is a dollar-saving choice. Factory training and our bi-directional SpinCaster™ enable a 3-person city crew to reinforce, seal and protect four to eight structures per day.

ADVANTAGES:

- Supervisors schedule crews as they are available on a day-to-day basis
- Cities typically save \$250,000 or more by doing 100 to 500 structures during the season
- Factory training & APM's bi-directional SpinCaster™ provide crews with the knowledge & equipment necessary for quality self-installs

SPINCASTER™ FEATURES & BENEFITS:

- Pneumatic, spark-free, explosion-proof motor
- Bi-directional rotation to ensure even application
- Rotates at 3,500 rpm to maximize radial impingement of mortar to the substrate
- High rpm speed keeps the SpinCaster™ centered in the structure
- Applies material at the best design thickness calculated for the diameter, depth & conditions of the existing pipe
- Can be started & stopped as needed without joints or gaps
- Manufactured with stainless steel for easy cleanup
