

## COR+ROC® EPOXY GEL COATINGS

COR+ROC® is a two-component epoxy-based polymer gel liner that is applied through our bi-directional SpinCaster™ or may be trowel-applied. The liner sets in 30-45 minutes.

SpinCaster™ applying COR+ROC®

### USES:

- For corrosion protection & structural repair in sewer systems:
  - High-build, two-component epoxy gel repair material applied 1/8" to 3/8" thick
  - High compressive and tensile strength spot repair for damaged concrete or mortar
  - Adhesive bridge for bonding new to old concrete
  - Crack repair
  - Bench repair

### ADVANTAGES:

- Structural shell reinforcement
- Self-priming
- Application surface may be damp (saturated surface dry)
- Thickness is easily verified with a wet gauge
- Bonds well to substrate
- Excellent corrosion protection
