

MAN ENTRY LAPEL LINER FOR LARGE DIAMETER MAIN PIPES

The Lapel Liner for Large Diameter Pipes is a solution for rehabilitating the main-to-lateral connection in lined or unlined mainline pipes with diameters from 27 to 60 inches and lateral diameters from 4 to 24 inches via man entry. The system provides a one-piece structural lateral lining and sealed connection to the main.

FEATURES:

- Patent-pending technology creates a watertight connection between the CIPP lining & the original host pipe without the need for resin bonding
- Stainless steel compression ring fastened to the main pipe creates a one-piece lateral lining & sealed connection
- Insignia™ gasket-sealing technology prevents water from re-entering the pipe
- Liner is mechanically anchored by stainless steel fasteners & engineered to withstand specific hydrostatic loading
