

5 REASONS NOT TO DIG

PRESERVE THE YARD & LANDSCAPING Trenchless rehabilitation repairs pipelines without the need to dig up existing grass, landscaping, driveway or patio.

PREVENT DAMAGE TO WIRES & UTILITIES Not having to dig means any underground cables or utility lines will be left undisturbed.

REDUCE "OUT OF SERVICE" TIME The less disruptive no-dig process enables water and waste utilities to be turned back on more quickly.

COMPLETE PROJECTS FASTER Because CIPP repair is less invasive than dig and replace, the duration of projects is much shorter.

SAVE MONEY Less equipment + fewer materials + faster turn time = a more affordable solution.

DIG

NO DIG

THE NO-DIG SOLUTION YOU CAN TRUST

Perma-Liner™ (PLI) is the leading manufacturer and supplier of trenchless pipeline rehabilitation equipment & materials in North America. Since 1999 PLI has developed systems to rehabilitate existing sewer systems without excavation.

Cured In Place Pipe (CIPP) is a trenchless pipe repair process that involves little to no digging. A resin-saturated felt tube made of polyester, fiberglass cloth or a number of other materials suitable for resin impregnation is inverted or pulled into a damaged pipe. This process makes for a potentially more cost-effective and less disruptive method than traditional "dig and replace" pipe repair methods.
