

LightRay® LR3 Pull-In-Place UV System
Product Bid Submittal
Revised July 21, 2026

Appendix A – LR3 Product Submittal Review

Appendix B – Independent Testing

Appendix C – Safety Data Sheet

Appendix D – LR3 Product Specifications

Appendix A

Product Submittal Review

ITEM 1.

Manufacturer Company Name: Perma-Liner Industries

Contact Individual: Evan Johnson - Product Manager

Street Address: 13000 Automobile Boulevard, Suite 200

City, State, Zip Code: Clearwater, Florida 33762

Telephone: (727)507-9749

Product Submittal: INSTALLATION PRACTICE FOR SECTIONAL REHABILITATION OF GRAVITY-FLOW PIPELINES USING A UV-CURED CIPP LINER INSTALLED BY THE PULL-IN-PLACE METHOD

ITEM 2.

INTENT:

This specification covers material requirements, installation practices, and test methods for the trenchless sectional rehabilitation of existing gravity-flow pipelines. The LightRay® LR3 system installs a factory resin-impregnated fiberglass liner over a translucent inflatable packer. The liner/packer assembly is pulled through the host pipe from an available access point and positioned at a predetermined repair section located up to 150 feet from the LR3 reel. The packer is inflated to press the liner firmly against the host pipe and held under pressure while a controlled ultraviolet light source cures the resin. The LR3 system repairs sections up to 20 feet in length. When cured, the liner forms a continuous, tight-fitting, corrosion-resistant structural CIPP repair within the existing pipe. Installation practices shall conform to ASTM F3541-22. Perma-Liner Industries, LLC is the owner of the LightRay® trademark.

ITEM 3.

3.0 The Technique	The repair structurally renews the lateral. The repair consists of a one-piece, lateral lining that is vacuum impregnated with UV initiated resins and pushed or pulled from an access point into the pipe by the action of a packer assembly; hereby referred to as a "Packer". See Appendix D Specification Sheet
3.1 Operation and Installation Method	The reconstruction is accomplished using knitted fiberglass tube of particular length and a UV initiated vinyl ester resin with physical and chemical properties appropriate for the application. The liner is installed by cutting to length and sliding it over the packer assembly. The packer is inserted into the pipe and inflated. The resin saturated tube is UV light cured and the packer is removed. The end result is a one-piece structural lining. The cured finished materials as described above will, upon installation inside the host pipe, exceed the minimum test standards specified by the American Society for Testing Methods ASTM F1216.
3.2 Intended Use	The system is designed for fully deteriorated pipe conditions. Typical installations are a direct result of ground water infiltration, root intrusion and structural defects such as open joints, offset joints, broken or missing pipe sections and hammer taps. The new pipe exhibits a smoothbore interior that typically increases flow rates.
3.3 Existing Pipe Materials	Compatible with all typical sewer and drainpipe materials.
3.4 Diameter Range	LR3 liners and packers are available for 3, 4, 6, 8, 9, 10, and 12 inch host pipes.
3.5 Diameter Transitions	The liner can transition from one pipe size to another ensuring adequate liner thickness throughout the lining.
3.6 Circular / Non-Circular Capability	The system can accommodate host-pipe ovality up to -10%.
3.7 Maximum Reach from Access Point	The repair location may be positioned up to 150 feet from the LR3 reel/access point.
3.8 Material Limitations	The LR3 system is intended for gravity-flow, non-pressure sewer and drain applications.
3.9 Lining Material Composition	Proprietary knitted fiberglass tube. Minimum finished wall thickness is typically 3.0 mm for 3-8 inch repairs and 4.0 mm for 9-12 inch repairs unless a project-specific design requires otherwise.
3.10 Resin System	UV-initiated aromatic vinyl ester resin (low VOC), factory impregnated to the manufacturer's specified resin loading. High temperature and chemically resistive UV-initiated methacrylates are also available.
3.11 Mechanical Locking	Excess resin migrates into cracks, joints, and surface irregularities in the host pipe, contributing to mechanical anchoring of the cured repair.
3.12 Physical Properties	Flexural Strength: 4,500 psi "minimum" test method, ASTM D790. Flexural Modulus: 250,000 psi "minimum" test method, ASTM D790.

3.13 Chemical Resistance	Meets the requirements of ASTM F1216 for typical domestic sewage effluent. (See Independent Laboratory Testing)
3.14 Resin Saturation Method	The liner is vacuum impregnated with the UV initiated resin and weighed for saturation accuracy as a final quality control check at the manufacturer.
3.15 Gasket-Sealed End Seals	The hydrophilic gasket seals shall include test data that supports substantial expansion properties so to form a watertight compression end seal at the terminating ends of the CIP-lateral liner. The test protocol shall simulate subterranean conditions and hydraulic loading at surface. Gasket seal submittals must include tests data simulating hydration/ dehydration conditions for a period of 10,000-hours and the test results must successfully demonstrate and document long-term performance without deterioration, loss of material, flexibility, and expansion of the gasket during repeated cycles of hydration and dehydration. Hydrophilic compression O-rings may be included at one or both terminal ends when required by the project. Where specified, the seals shall comply with the applicable provisions of ASTM F3240.
3.16 Installation Productivity	The UV curing system allows many pipes to be renewed in a day, dependent upon installation conditions. Typical installs occur in less than 30 minutes, dependent upon pipe preparation needs (hydro-jetting, abrasive cutting, etc.).
3.17 Missing Pipe Sections	The liner can span small missing sections of pipe and is designed to be a self-sustaining pipe if conditions of ASTM F1216 are met.
3.18 Effects of Line, Grade, and Bends	There are no effects caused by grade changes since air pressure is used to inflate the liner. The liner is flexible during insertion and can accommodate and negotiate 22°, 45° and 90° bends.
3.19 Protrusions	It is recommended that all protrusions within the pipe be ground flush using a rotary cutting tool or equivalent prior to lining. Although the liner can navigate and cure over substantial protrusions, it will impact the liner's structural integrity and flow characteristics.
3.20 Reduction in Pipe Diameter	The liner exhibits a slick and typically smooth interior with a co-efficient that typically increases flow-rates over that of the damaged pipe. Minor wrinkling may occur at bends of 45-degrees and greater and some wrinkling may occur based on actual inner pipe diameter, inner surface, pipe configuration and conditions.

ITEM 4.

4.0 Sewer Preparation and Flow Control	Pipes should be prepared utilizing high-pressure water or mechanical cleaning tools removing all roots, debris and obstructions. When possible, all flow should be inhibited or diverted to prevent debris from being trapped behind the cured liner. However, the liner will fully cure in the presence of water. Warning: high pressure infiltration may wash resin out of the liner impacting the liner's structural integrity.
4.1 Installation Crew and Equipment	A typical crew consists of (2) technicians. The installation process is typically quick, efficient and non-disruptive when compared to open cut replacement methods.
4.2 Pull-In-Place / Inflation Method	Air pressure is applied to the liner through the packer. The packer extends past each terminal end of the lining assembly, so the ends remain open and no post-curing cutting is necessary.
4.3 Repair Length	The longest single cured repair section is limited to 20ft, but sequential curing can be used to produce longer continuous repairs as required.
4.4 UV Curing Method	The Resin and UV curing systems are proprietary to LightRay and Perma-Liner Industries. The system can cure liners in as little as 5 minutes depending on the diameter.
4.5 Packer Deflation and Removal	The packer is deflated via the control box and removed. The packer and associated hardware are designed to handle the forces experienced during the retrieval process.
4.6 Final Inspection and Documentation	A final video inspection should be performed from the access point to see the termination point of the liner.
4.7 Design Life	Each product comes with a standard 10-year warranty. 50-Year Design Life based on assumption described in ASTM F1216 Appendix X1 and long-term creep as described in ASTM D2990.

Re: 10,000 Hour Test Report
ASTM D 2990 Flexural Creep Test
50-Yr Linear Extrapolation
Sample ID. Light Ray UV
HTS Test Report No. 21-P-0261-01

Please find the enclosed 10,000 hour Flexural Creep test report and the 50-Yr Linear extrapolation of the test results.

Flexural Creep testing was performed in accordance with ASTM D2990-09 Section 6.3, Standard Test Methods for Tensile, Compressive, and Flexural Creep and Creep-Rupture of Plastics.

One (1) set of five (5) test specimens was conditioned in accordance with Procedure A of ASTM D618-13, prepared in accordance with ASTM D790, and placed on the test rack with the calculated amount of stress applied.

We greatly appreciate the opportunity to work with you and Reline America. Please let me know if you have any questions or comments.

Sincerely,

HTS Pipe Consultants

TEST REPORT

PAGE 1 OF 5

FOR: Perma-Liner Industries, LLC.
13000 Automobile Blvd., Suite-300
Clearwater, FL 33762
Tel: (727) 744-2594 / Fax: (727) 507-9849
ATTN: Mr. Rishi Vasudeva

LWR NO.: 21144 DATE: April 21, 2020

BACKGROUND:

The client submitted two (2) samples of Drain Epoxy pipe for testing. The samples arrived on 03/27/2020 via customer-supplied courier. Visual inspection was performed on 03/27/2020 and no product defects were noted. Testing in accordance with customer PO #22364 and approved CRT quote received on 03/31/2020. The following additional information is provided:

CRT order entry log date: 03/31/2020 / **Report due date:** 04/30/2020

PRODUCT ID:

Two (2) samples of Perma-Liner UV-LED PIPE, identified as:
1) LightRay UV-LED PIPE 3" Diameter Thickness 2.5mm
2) LightRay UV-LED PIPE 6" Diameter Thickness 3.0mm

PREPARATION:

Machining, CNC & Preparation – ASTM D638-14 / CRT
Conditioning – ASTM D618-13, 40 h in a standard laboratory environment

SPECIFICATION:

ASTM F1743-17(Vol.: 8.04 2020) Standard Practice for Rehabilitation of Existing Pipelines and Conduits by Pulled-in-Place Installation of Cured-in-Place Thermosetting Resin Pipe (CIPP):

TEST PROCEDURES: Resin properties (<82.2C) via Differential Thermal Analysis (DSC), N₂ – Section 5.2.3 (ASTM D3418-15)

Workmanship, Finish & Appearance – Section 6.8

7-day Chemical Resistance – Section 7.2.1

Type-I Tensile Properties @ 23°C (Psi) – ASTM D638-14

Flexural Properties @ 23°C (Psi) – ASTM D790-17

Dimensions and Tolerances, Wall Thickness @ 23°C (") – ASTM D5813-04

TEST RESULTS:

The results of testing are reported in tables 1 thru 4, attached.

CONCLUSION:

Based on the test results achieved, both samples meet the minimum requirements outlined in ASTM F1743-17(Vol.: 8.04 2020)...**Complies.**

Specimen Retain Bin: BB (30-day retain only unless otherwise specified)

Signed on behalf of:

...*Complies*

The liability of CRT Labs with respect to the work and report covered herein, shall in no event exceed the amount of the invoice. We recommend consideration that correlative data be generated by other laboratories in matters of litigation. CRT will retain tested samples for 30 days after testing is completed, unless other arrangements are agreed upon at the time order is placed. This report, whether in whole or in part, any logo, etc., in advertising or publicity must have CRT's written permission prior to use. This test data is for exclusive use of the client to who it is addressed and results apply only to sample(s) tested and does not apply to similar or identical products. This report shall not be reproduced except in full. Testing performed in accordance with ISO 17025. Form Q.S. 43 (02/19)

Appendix C

Section 1. Identification

Product name LightRay Liner/ L040-LIGHTRAY
Product type Vinyl Ester Resin
Chemical family Aromatic.
SDS No. XNA-1804:1446 (Version: 2.1)
Relevant identified uses of the substance or mixture and uses advised against
Identified uses Used in the manufacture of thermoset plastic parts.
Uses advised against No additional information.
Supplier's details United States:

Emergency telephone number

CHEMTREC Within USA and Canada	+1 (800) 424-9300	CCN1023
CHEMTREC Outside USA and Canada	+1 (703) 527-3887	
CANUTEC Within Canada	+1 (613) 996-6666	

Section 2. Hazards identification

OSHA/HCS status

This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Classification of the substance or mixture

SKIN CORROSION/IRRITATION – Category 2 – H315
 SERIOUS EYE DAMAGE/ EYE IRRITATION – Category 2 – H319
 SENSITIZATION (Skin) – Category 1 – H317
 SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Respiratory system) – Category 3 – H335

GHS label elements

Hazard pictograms

Signal word

Warning

Hazard statements

H315: Causes skin irritation.
 H319: Causes serious eye irritation.
 H317: May cause an allergic skin reaction.
 H335: May cause respiratory irritation.

Precautionary statements

General

P101: If medical advice is needed, have product container or label at hand.
 P102: Keep out of reach of children.

Prevention

P261: Do not breathe vapor or mist.
 P270: Do not eat, drink or smoke when using this product.
 P264: Wash hands thoroughly after handling.
 P271: Use only outdoors or in a well-ventilated area.
 P272: Contaminated work clothing should not be allowed out of the workplace.
 P280: Wear protective gloves/protective clothing/eye protection/face protection.

Section 2. Hazards identification

Response

P302+P352: IF ON SKIN: Wash with plenty of soap and water.
 P333+P313: If skin irritation occurs, get medical advice/attention.
 P362+P364: Take off contaminated clothing and wash it before reuse.
 P304+P340: IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
 P305+P351+P338: IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
 P337+P313: If eye irritation persists, get medical advice/attention.
 P312: Call a POISON CENTER or doctor/physician if you feel unwell.
 P391: Collect spillage.

Storage

P403 + P235: Store in a well-ventilated place. Keep cool.
 P233: Keep container tightly closed.
 P405: Store locked up.

Disposal

P501: Dispose of contents and container in accordance with all local, regional, national and international regulations.

Hazards not otherwise classified

None known.

Section 3. Composition/information on ingredients

Substance/mixture Mixture.

Ingredient name	CAS number	%
(1-methyl-1,2-ethanediyl)bis[oxy(methyl-2,1-ethanediyl)] diacrylate	42978-66-5	≥25 - ≤50
phenyl bis(2,4,6-trimethylbenzoyl)-phosphine oxide	162881-26-7	≤0.3

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact

Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Use of buffered baby shampoo will aid in removal. If irritation persists, get medical attention.

Inhalation

Move the victim to a safe area as soon as possible. Allow the victim to rest in a well-ventilated area. If breathing is difficult, give oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Skin contact

In case of contact, immediately flush skin with plenty of water. Remove contaminated clothing and shoes. If irritation persists, seek medical attention. Wash contaminated clothing before reuse. Clean shoes thoroughly before reuse.

Ingestion

Wash out mouth with water. Remove dentures if any. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Seek immediate medical attention.

Most important symptoms/effects, acute and delayed

Eye contact

Causes serious eye irritation.

Inhalation

May cause respiratory irritation.

Skin contact

May cause allergic skin reactions with repeated exposure.

Ingestion

Irritating to mouth, throat and stomach.

Over-exposure signs/symptoms

Eye contact

Adverse symptoms may include the following: pain or irritation, watering, redness.

Date of issue: 09/20/2018

Date of previous issue: 08/15/2018

XNA-1804:1446 (Version: 2.1)

Page: 2 of 8

Section 4. First aid measures

Inhalation

Adverse symptoms may include the following: respiratory tract irritation, coughing.

Skin contact

Adverse symptoms may include the following: irritation, redness.

Ingestion

Adverse symptoms may include the following: Irritating to mouth, throat and stomach..

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician

Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media

Use dry chemical, CO₂, water spray (fog) or foam.

Unsuitable extinguishing media

Do not use water jet.

Specific hazards arising from the chemical

No specific fire or explosion hazard.

Hazardous thermal decomposition products

No specific data.

Special protective actions for fire-fighters

Fire water contaminated with this material must be contained and prevented from being discharged to any waterway, sewer or drain.

Special protective equipment for fire-fighters

Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel

No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation.

For emergency responders

If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment. See also the information in "For non-emergency personnel".

Environmental precautions

Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air). Water polluting material. May be harmful to the environment if released in large quantities.

Methods and materials for containment and cleaning up

Small spill

Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Use spark-proof tools and explosion-proof equipment. Dispose of via a licensed waste disposal contractor.

Large spill

Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Use spark-proof tools and explosion-proof equipment. Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures

Put on appropriate personal protective equipment (see Section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. Do not breathe vapor or mist. Do not ingest. Avoid contact with eyes, skin and clothing. Avoid release to the environment. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.

Advice on general occupational hygiene

Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Eliminate all ignition sources. Segregate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination. Refer to the product label and/or technical data sheet for further information.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

None.

Appropriate engineering controls

Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Individual protection measures

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection

Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists or dusts.

Hand protection

Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary.

Body protection

Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection

Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Appearance

Physical state	Liquid.
Color	Yellow.
Odor	Acrylate
Odor threshold	Not available.
pH	Not applicable.
Melting point	Not available.
Boiling point	Not applicable.
Flash point	>201°F / >94°C
Evaporation rate	Not available.
Flammability (solid, gas)	Not applicable.
Lower and upper explosive (flammable) limits	Not available.
Vapor pressure	Not available.
Vapor density	Not established.
Relative density	1.038 (Water = 1)
Solubility	Negligible.
Partition coefficient: n-octanol/water	Not available.
Auto-ignition temperature	Not available.
Decomposition temperature	Not available.
Viscosity	Not available.
Molecular weight	Not available.

Section 10. Stability and reactivity

Reactivity

No specific test data related to reactivity available for this product or its ingredients.

Chemical stability

The product is stable. Stable under recommended storage and handling conditions (see Section 7).

Possibility of hazardous reactions

Under normal conditions of storage and use, hazardous reactions will not occur.

Conditions to avoid

Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.

Incompatible materials

Reactive or incompatible with the following materials: oxidizing materials

Hazardous decomposition products

Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Ingredient name	Result	Species	Dose	Exposure
(1-methyl-1,2-ethanediyl)bis[oxy (methyl-2,1-ethanediyl)] diacrylate phenyl bis(2,4,6-trimethylbenzoyl)-phosphine oxide	LD50 Oral	Rat	6200 mg/kg	-
	LD50 Dermal	Rat	>2000 mg/kg	-
	LD50 Oral	Rat	>2000 mg/kg	-

Irritation/Corrosion

Ingredient name	Result	Species	Score	Exposure	Observation
(1-methyl-1,2-ethanediyl)bis[oxy (methyl-2,1-ethanediyl)] diacrylate	Eyes - Severe irritant	Rabbit	-	24 hours 100 microliters	-
	Skin - Moderate irritant	Rabbit	-	500 milligrams	-

Sensitization

May cause sensitization by skin contact.

Carcinogenicity

Section 11. Toxicological information

Classification

Ingredient name	ACGIH	IARC	NTP
None of the components are listed.			

Mutagenicity

No mutagenic effect.

Reproductive toxicity

Not considered to be toxic to the reproductive system.

Teratogenicity

No known effect according to our database.

Specific target organ toxicity (single exposure)

No known effect according to our database.

Specific target organ toxicity (repeated exposure)

No known effect according to our database.

Aspiration hazard

No known effect according to our database.

Potential acute health effects

Eye contact

Causes serious eye irritation.

Inhalation

May cause respiratory irritation.

Skin contact

May cause allergic skin reactions with repeated exposure.

Ingestion

Irritating to mouth, throat and stomach.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact

Adverse symptoms may include the following: pain or irritation, watering, redness.

Inhalation

Adverse symptoms may include the following: respiratory tract irritation, coughing.

Skin contact

Adverse symptoms may include the following: irritation, redness.

Ingestion

Adverse symptoms may include the following: Irritating to mouth, throat and stomach..

Section 12. Ecological information

Toxicity

Ingredient name	Result	Species	Exposure
(1-methyl-1,2-ethanediyl)bis[oxy (methyl-2,1-ethanediyl)] diacrylate	EC50 3.68 mg/l	Algae	96 hours
	LC50 35.96 mg/l	Daphnia	48 hours
	LC50 4.9 mg/l	Fish	96 hours

Persistence and degradability

Not available.

Bioaccumulative potential

Ingredient name	LogP _{ow}	BCF	Potential
(1-methyl-1,2-ethanediyl)bis[oxy (methyl-2,1-ethanediyl)] diacrylate	2	46.83	low
	5.77	<5	low
phenyl bis(2,4,6-trimethylbenzoyl)-phosphine oxide			

Mobility in soil

Soil/water partition coefficient (K_{oc})

Not available.

Section 12. Ecological information

Other adverse effects

No known effect according to our database.

Section 13. Disposal considerations

The information in this section contains generic advice and guidance. The list of Identified Uses in Section 1 should be consulted for any available use-specific information provided in the Exposure Scenario(s).

Disposal methods

The generation of waste should be avoided or minimized wherever possible. Empty containers or liners may retain some product residues. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Avoid disposal. Attempt to use product completely in accordance with intended use. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible.

Special precautions

This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Section 14. Transport information

DOT / TDG/ IMDG/IMO / ICAO/IATA and National regulations.

UN number	UN3082
Proper shipping name	Environmentally hazardous substance, liquid, n.o.s.(Tri(propylene glycol) diacrylate)
Transport hazard class(es)	9

Packing group

III

Additional information

US regulations require the reporting of spills when the amount exceeds the Reportable Quantity (RQ) for specific components of this material. See CERCLA in Section 15, Regulatory Information, for the Reportable Quantities.

IMDG No additional information.

IATA No additional information.

Environmental hazards

Marine pollutant: Yes.

Special precautions for user

Transport within user's premises: always transport in closed containers that are upright and secure. Ensure that persons transporting the product know what to do in the event of an accident or spillage.

Section 15. Regulatory information

International regulations lists

United States inventory (TSCA 8b)

All components are listed or exempted.

Australia (AICS)

Not determined.

Canada (DSL)

All components are listed or exempted.

Appendix D

Product Name: UV Flex Liner (Pull in Place)

Product Description: Flexible fiberglass liner for use with Light Ray technology

Typical Applications:

Use this material with WRT's Light Ray PIP technology for CIPP repairs in as little as 6 minutes. Works well in systems with multiple 45° or 90° bends as well as transitions. Materials flexibility allows for ease of inflation as well as molding to the host pipe and leaving little to no void.

Performance Limits

**** If product is utilized outside the limits defined below, warranty coverage is voided ****

Characteristic	Spec	Comments	
General			
Typical dry Thickness (mm)	3 – 5.5		
Typical finished Thickness (mm)	2.8 – 5.3	Depends on installation pressures, pipe diameter, and number of bends (45° & 90°). Approx. 0.3mm thinner than dry thickness.	
Liner Sizes available (in.)	3, 4, 6, 8	Thk. available: (3",4",6") = 3mm (8") = 4mm or 5mm	
Liner Undersize %	10%	As compared to nominal pipe dimension	
Repairable Nominal Pipe Sizes (in.)	3 - 12	Liners can upsize 50% (3"→4.5", 4"→6", 6"→9", 8"→12")	
Coating	None		
Resins			
Light Ray UV Vinyl Ester	YES	Product comes pre-wet with this resin. **May work with other resins but use of other resin voids warranty**	
Install Design			
 DEPENDENT ON PIPE INSTALLATION CONDITIONS. ** Typical Max Depth of Install (ft) for Structural Integrity	3" → 9' 4" → 5' 6" → 3' ≥8" → 0'	WORST CASE:	- Pipe ovality = 10% - Very soft, uncompacted soil - Flood plains & High-Water Table - Pipe Condition = Fully Deteriorated
	3" → 52' 4" → 30' 6" → 15' 8" (3mm) → 11' 8" (4mm) → 15' 10" (4mm) → 10' 12" (4mm) → N/R	TYPICAL CASE: <i>(Fully Deteriorated)</i>	- Pipe ovality = 5% - Moderately compacted soil - 10ft water table below surface - Pipe Condition = Fully Deteriorated
	3" → 65' 4" → 37' 6" → 19' 8" (3mm) → 16' 8" (4mm) → 23' 10" (4mm) → 16' 12" (4mm) → 14'	TYPICAL CASE: <i>(Partially Deteriorated)</i>	- Pipe ovality = 5% - Moderately compacted soil - 10ft water table below surface - Pipe Condition = Partially Deteriorated
	3" – 12" → Any Depth	BEST CASE:	- Pipe ovality = 2% - Highly compacted soil - No water above pipe - Pipe Condition = Partially Deteriorated
Can be used across Transitions?	YES	Stretch must be accounted for when upsizing	
Remote Start Allowed?	NO		
Install with Infiltration Allowed?	Not Recommended	High I&I situations may impact the structural integrity of any installed liner.	

		Contact representative to discuss specific application.
Resin per FT	Varies by size, resin type	Light Ray UV Resin: 3" – 0.37 lbs./FT, 4" – 0.55 lbs./FT, 6" – 0.83 lbs./FT, 8" – 1.1 lbs./FT → 10" & 12" use upsized 8"
Maximum Continuous Operating Temperature	120°F (49°C)	
Installation		
Wet Out Gap Setting	9.8 mm	When using the WRT Wet Out Roller System and proper vacuum **DO NOT USE FLOOR ROLLER FOR RISK OF RESIN SHY FINAL PRODUCT**
Typical Inflation Pressures (psi)	Reference LR3 Process Table	Depends on installation length, pipe diameter, and number of bends (45° & 90°)
Maximum Inflation Pressure (psi)	Reference LR3 Process Table	Pressures exceeding this limit run the risk of tearing the liner or excessive "thinning" around bends
Max Curing Pressures (psi)	25	Pressures exceeding this limit run the risk of tearing the liner or excessive "thinning" around bends
Stretch Factor - (Size on Size Installation)	1.03	Multiply Repair Length by value shown to determine liner length
Stretch Factor - (Transition UP 50%)* 4" → 6" 6" → 9" 8" → 12"	1.25	Multiply Repair Length by value shown to determine liner length <i>*For intermediate sizes, contact Waterline representative</i>
Suitable Host Pipe materials		Cast iron, ABS, PVC, Orangeburg, Clay
Storage Guidelines
